

landing page 2.0

Overall Design Direction

Modern AI Product Landing Page

- adopting the same design philosophy:
- clean
- spacious
- interactive
- premium
- AI feeling
- subtle animations
- glassmorphism
- smooth gradients

The page should make users feel

"This is an intelligent platform."

instead of

"This is a college project."

Problems in Current Design

1. Hero Section is Static

Current Hero

Heading

Paragraph

Buttons

This is too empty.

Visitors see lots of whitespace but nothing that demonstrates the product.

2. No Visual Storytelling

The landing page never shows

- prediction
- analytics
- AI
- roadmap
- dashboard

Everything is text.

3. Sections feel disconnected

Currently

Hero

↓

About

↓

Features

↓

How it works

↓

Footer

This looks like a template website.

There is no narrative.

4. Feature cards are generic

Current

Dashboard

Skill Gap

Roadmap

Prediction

These cards look like blog cards.

Instead they should immediately communicate value.

5. No excitement

Nothing moves except hover.

Nothing reacts.

Nothing catches attention.

New Landing Page Flow

I would redesign the entire page like this.

1. Sticky Navigation (Transparent)

Instead of white navbar.

Use

Transparent

↓

On scroll

Blur background

↓

Glass effect

Logo

Features

How it Works

Pricing (Future)

About

Login

Get Started

Buttons

Sign In

Get Started

2. Hero Section (Complete Redesign)

Instead of only text.

Split into

Left 45%

Right 55%

Left

Large Heading

AI Career Coach
for Computer Engineering Students

Below

Predict placements.

Identify missing skills.

Generate AI roadmaps.

Track your growth.

-all in one platform.

Then

Buttons

Get Started

Watch Demo

Below buttons

Small trust badges

✓ Personalized

✓ AI Powered

✓ Data Driven

✓ Engineering Focused

Right Side

Instead of empty space

Show floating UI cards

Example

Placement Prediction

87%

Probability

Floating

Skill Gap

React

Docker

System Design

Floating

Roadmap

Week 1

Week 2

Week 3

Floating

Progress

82%

Completed

Cards slowly float up/down continuously.

This immediately shows the product.

Background

Large radial gradient

Blur circles

Grid pattern

Tiny particles

Very subtle.

3. Social Proof Section

Immediately below hero

Designed for

Computer Engineering Students

Placement Preparation

Industry Skills

Career Growth

Use icons

instead of logos.

4. Problem Section

Instead of About.

Title

Why Students Struggle During Placements

Use 4 cards.

- ✗ Random learning
- ✗ Unknown skill gaps
- ✗ No clear roadmap
- ✗ No placement confidence

Then

Arrow

↓

CareerLens

↓

Solution cards.

This tells a story.

5. AI Features Section

Instead of generic cards.

Use Bento Grid.

Large cards.

Different sizes.

Example

Large

Placement Prediction

ML powered prediction

Probability

Factors

Confidence

Second

Skill Gap Analysis

Industry comparison

Missing skills

Recommendations

Third

Roadmap Generation

Personalized timeline

Milestones

Resources

Weekly goals

Fourth

Progress Dashboard

Track improvement

Achievements

Analytics

Fifth

Resume Insights (Future)

Sixth

Career Recommendations

Cards have

gradient borders

glass effect

hover glow

icon animation

6. Interactive Demo Section

This is something many student projects miss.

Create

See CareerLens in Action

Instead of screenshots.

Mock Dashboard

CGPA

Projects

DSA

Python

SQL

Communication

Click

Analyze

↓

Animate

Prediction

78%

↓

Skill Gap

↓

Roadmap

Even fake animation makes the site feel alive.

7. How CareerLens Works

Instead of vertical steps.

Create horizontal timeline.

Create Profile

↓

Analyze Skills

↓

AI Prediction

↓

Skill Gap

Roadmap

Track Progress

Animated connector line.

8. Roadmap Preview

This section is missing.

Show

Week 1

DSA Arrays

Week 2

OOP

Week 3

React

Week 4

Mini Project

Interview Prep

Looks like an AI-generated plan.

9. Placement Prediction Preview

Instead of explaining.

Show dashboard.

Prediction

84%

Strengths

Python

Projects

Communication

Weakness

SQL

System Design

DBMS

Charts

Progress

Circular indicator

10. Skill Gap Visualization

Show radar chart illustration.

Or

Progress bars

Python

95%

React

68%

DSA

84%

Docker

22%

Communication

70%

People immediately understand the feature.

11. Testimonials (Future)

Even if fake now.

Instead use

Built for

Third Year

Final Year

Placement Aspirants

Freshers

No fake reviews.

12. FAQ

Very useful.

Is it free?

How accurate is prediction?

Which students can use it?

Can roadmap change?

How is prediction calculated?

13. Final CTA

Huge section.

Ready to Build
Your Dream Career?

One button

Start Your AI Career Analysis

Background gradient.

Footer

Instead of minimal footer.

Use

CareerLens

1.3rem

Body

1rem

Increase whitespace.

Content Improvements

Instead of saying

| Dashboard Analytics

Say

| **Track Your Placement Journey**

Instead of

| Personalized Roadmap

Say

| **AI Roadmap Tailored to Your Current Skills**

Instead of

| Skill Gap

Say

| **Discover Exactly What Companies Expect**

Instead of

| Placement Prediction

Say

This is more benefit-driven.

Extra Sections Worth Adding

- **CareerLens AI Workflow** (Profile → ML Analysis → AI Insights → Roadmap)
- **Placement Readiness Score** (animated gauge)
- **Industry Skills Covered** (DSA, Web Dev, AI/ML, DBMS, CN, OS, Aptitude, Soft Skills)
- **Learning Resources Preview** (YouTube, Courses, Practice Platforms)
- **Roadmap Personalization Examples** (different outputs for Software Engineer, AI/ML, Full Stack)
- **Future Vision** (Resume Analysis, GitHub Integration, ATS Score, Mock Interviews)

Overall UX Score

Area	Current	Proposed
Visual Appeal	7/10	9.8/10
Product Storytelling	6/10	10/10
Modern Feel	6.5/10	9.5/10
AI Product Identity	5.5/10	10/10
Interactivity	5/10	9.5/10
User Engagement	6/10	9.8/10
Premium Look	6.5/10	9.7/10
